

Smart city awareness in Minsk: a case study

Mikhail Doroshevich
Baltic Internet Policy Initiative
mikhail.doroshevich@e-baltic.org

Our activities:

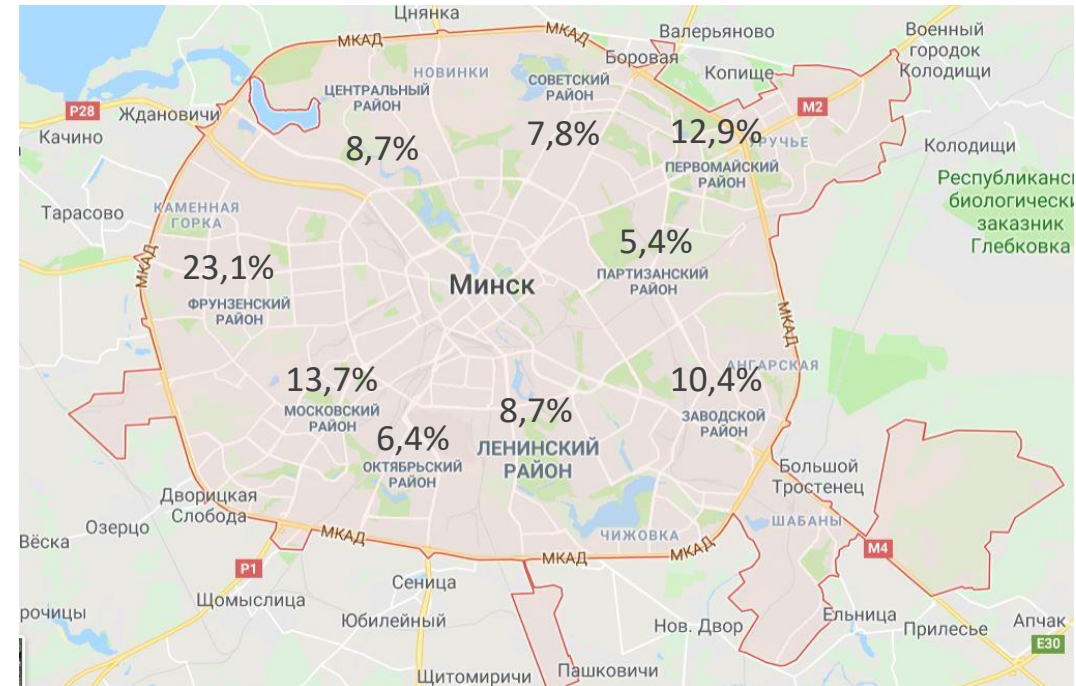

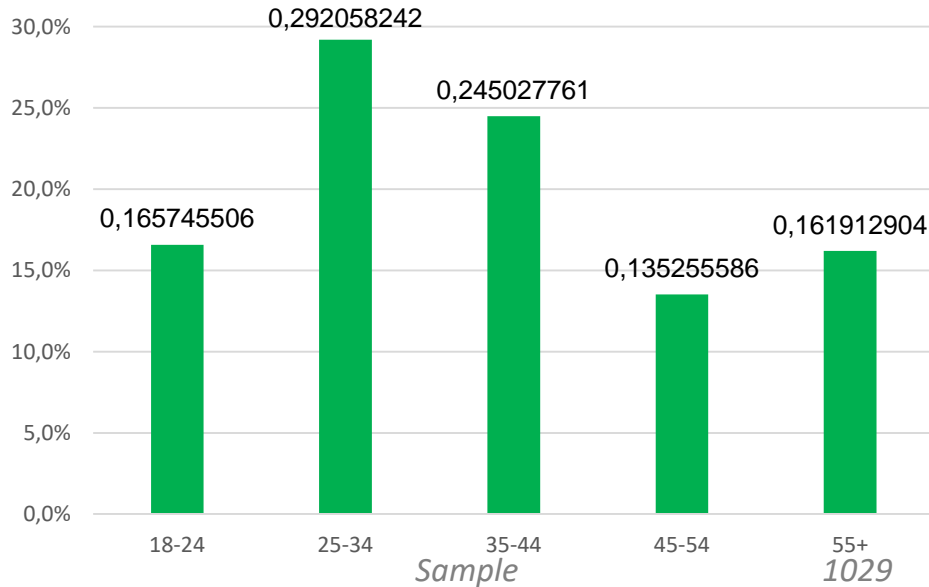

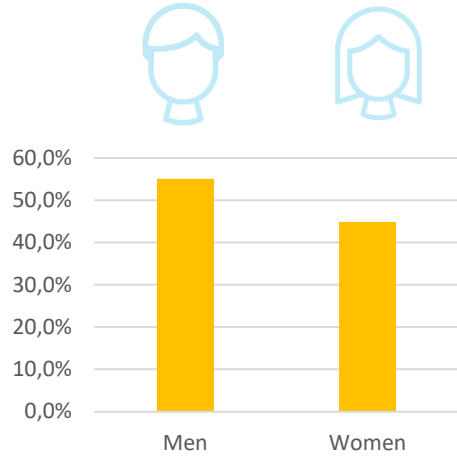

1. Education

2. Research

3. Prototypes

Respondents: Minsk internet users

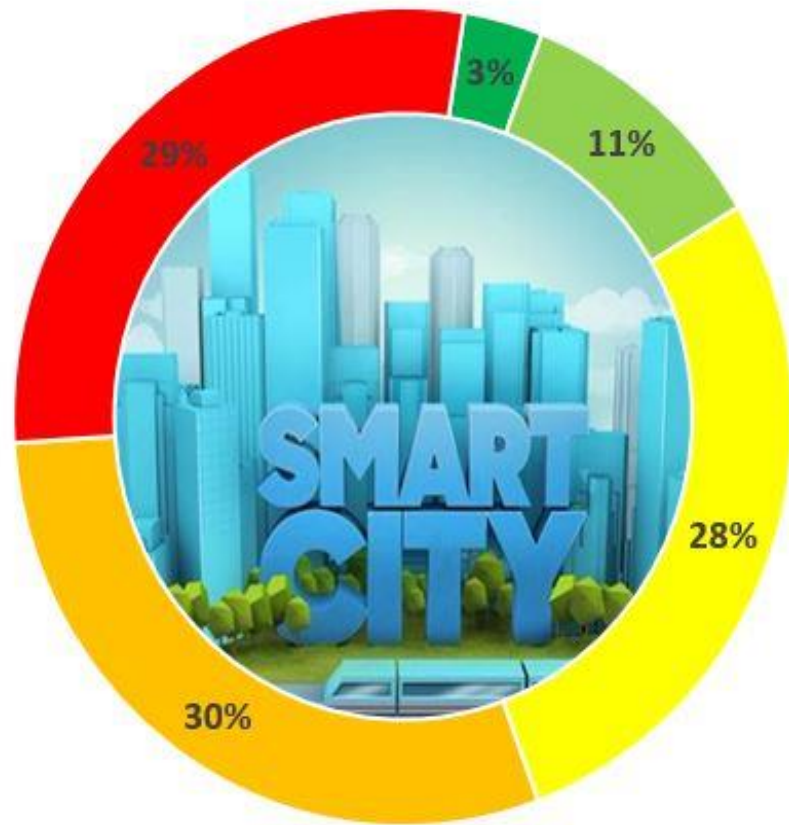

Do you know anything about "SmartCity" *?

**Smart City – a city in which improving urban infrastructure, quality of public services and effective contacts between citizens and city authorities are based on the active use of technologies (telecommunications and wireless networks, electronic equipment and software applications, the Internet of things, cloud data processing and big data analysis).*

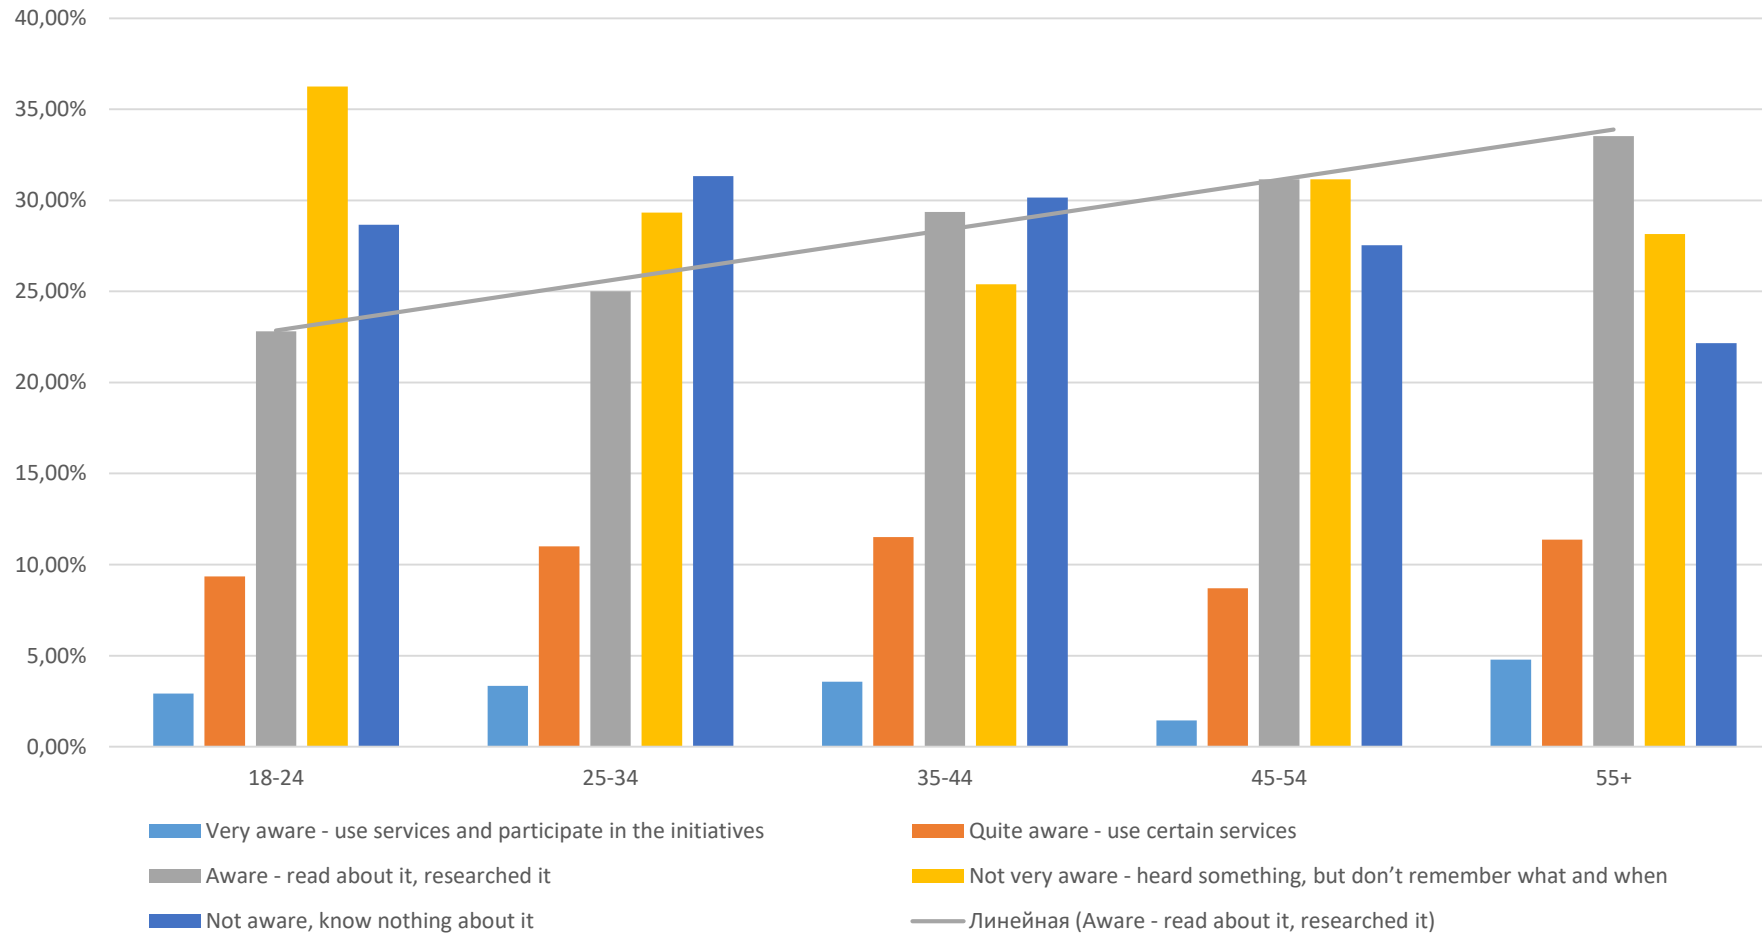

Level of awareness of Minsk Internet users

- Well aware - use services and participate in the initiatives
- Quite aware - use certain services
- Aware - read about it, researched it
- Not very aware - heard something, but don't remember what and when
- Not aware,- know nothing about it

**Minsk Internet users see Smart City as a set of services,
but**

**“smart city” is not a technical, but a socio-economic and political
(policy) project.**

**"Smart City" is sustainable and resilient, technologically equipped,
integrates data, intelligent, open**
